Other Findings:

FINDINGS

☒ **Normal Examination:** No evidence for congential heart disease (random or inherited).

☒ **Normal Examination:** No evidence for hypertrophic cardiomyopathy *at the time of this examination.* A normal examination today does not guarantee it will not develop in the future. (If an echocardiogram was not performed, early or mild stages may still be present)

☐ **Equivocal Examination:** A congeniial or adult-onset genetic heart disease cannot be definitively diagnosed or excluded. Findings point toward:
○ normal ○ physiologic or outflow tract murmur ○ subtle cardiac disorder (see comments below).

☐ **Abnormal Examination:** Evidence for ○ Hypertrophic Cardiomyopathy ○ Congenital Heart Defect or ○ Other Adult-onset Cardiac Disorder; with a diagnosis of: _____

Severity: ○ trivial ○ mild ○ moderate ○ severe

RECOMMENDATIONS

☒ ***No cardiac contraindication for elective breeding.*** If descendants from this individual develop hypertrophic cardiomyopathy, then a complete evaluation of parents and littermates is recommended.

☐ ***Hypertrophic cardiomyopathy was found.*** Breed specific guidelines should be followed.

☐ ***Provisional normal examination.*** A repeat evaluation within 6-9 months is recommended. Breeding considerations should be delayed until final evaluation.

☐ ***Treatment Maybe Indicted*** _____

Re-evaluation: ○ none, in ○ 3 months ○ 6 months ☒ 12 months ☒ 18 months ○ 24 months ○ other
